CLOSTRIDIUM DIFFICILE AGAR (7385)

Intended Use
Clostridium Difficile Agar is used with blood, Cycloserine, and Cefoxitin for the isolation of Clostridium difficile.

Product Summary and Explanation
Clostridium difficile is a major cause of antibiotic-associated diarrhea and pseudomembranous colitis. It is now one of the most commonly detected enteric pathogens, and an important cause of nosocomial infections in hospitals and nursing homes. The organism has been isolated from diverse natural habitats, including soil, hay, sand, dung from various large mammals, and from dog, cat, rodent and human feces.

In 1979, George et al. developed a medium called CCFA (Cycloserine-Cefoxitin-Fructose agar), based on the Egg Yolk Agar formula of McClung and Toabe with fructose replacing glucose. Clostridium Difficile Agar is a modification of the original CCFA formulation.

Principles of the Procedure
Proteose Peptone provides nitrogen, vitamins, and amino acids in Clostridium Difficile Agar. Fructose is the fermentable carbohydrate used to enhance recovery and growth of C. difficile. The Phosphates are buffering agents in this medium. Magnesium Sulfate is a source of inorganic ions to stimulate growth. Sodium Chloride maintains the osmotic balance of the medium. Agar is the solidifying agent.

Horse blood provides essential growth factors in Clostridium Difficile Agar. Cycloserine and Cefoxitin are selective agents against aerobic, anaerobic, and facultatively anaerobic Gram-positive and Gram-negative bacteria. At the concentration of antibiotics used C. difficile is not inhibited significantly, while other anaerobes, including most clostridia, are inhibited.

Final pH: 7.4 ± 0.2 at 25°C
Formula may be adjusted and/or supplemented as required to meet performance specifications.

Precautions
1. For Laboratory Use.
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

Directions
1. Suspend 69 g of the medium in one liter of purified water.
2. Heat with frequent agitation and boil for one minute to completely dissolve the medium.
3. Autoclave at 121°C for 15 minutes.
4. Cool to 45 - 50°C and aseptically add 7% horse blood, Cycloserine (0.5 g/L) and Cefoxitin (0.016 g/L).

Quality Control Specifications
Dehydrated Appearance: Powder is homogeneous, free flowing, and light beige.

Prepared Appearance: Prepared medium with supplements is opaque and red.
Expected Cultural Response: Cultural response on Clostridium Difficile Agar supplemented with 7% horse blood, Cycloserine, and Cefoxitin and incubated at 35 ± 2°C under the appropriate atmosphere and examined for growth after 24 - 72 hours.

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure
For a complete discussion on the isolation and identification of *C. difficile* and other anaerobic bacteria refer to specific procedures in appropriate references.¹ ³

Results
Colonies of *C. difficile* are 4 - 6 mm in diameter, irregular, raised, opaque, and grey-white after 48 hours incubation.

Storage
Store sealed bottle containing dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light.

Expiration
Refer to expiration date stamped on the container. Dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure
1. Due to nutritional variation, some strains may be encountered that grow poorly or fail to grow on this medium. Further tests are necessary for confirmation of *C. difficile*.
2. Clostridium Difficile Agar does not contain Neutral Red indicator because it is designed for use with horse blood.²
3. Typical Gram stain morphology of *C. difficile* may not be evident in colonies picked from this medium because of antibiotics present. Subculture suspected colonies to blood agar to obtain characteristic morphology.

Packaging
*Clostridium Difficile Agar* Code No. 7385A 500 g 7385B 2 kg 7385C 10 kg
